RÉSUMÉ / PROJECT-BASED PROFILE

YAS GOD

Web Developer · PHP, MySQL, React & Python APIs
Based in Iran · Available for small, clearly scoped projects

Profile

I develop and improve practical web interfaces and small application features. My focus is PHP/MySQL bug fixes, responsive components, dashboards and Python API integrations. I prefer clear requirements, agreed deliverables, relevant testing and a concise handover.

Technical skills

Web: PHP, MySQL, JavaScript, React, HTML, CSS
APIs: Python, REST API development and integration
Application areas: education platforms, administration dashboards, inventory interfaces

Selected portfolio work

- **Pharmacy inventory dashboard:** stock summaries, stock movement workflows, low-stock and expiry indicators.
- **Education websites and administration:** Python and AI learning paths, course navigation, and management dashboard interfaces.
- **Visual distance-estimation prototype:** calibration controls, target overlays and synthetic distance measurements. No validated real-world detection accuracy is claimed.

Descriptions are based on supplied portfolio screenshots. Source code for those original projects is not included in the demo repository.

New demonstration projects

- Stockroom: browser-local stock search, validated movements, low-stock alerts and persistence.
- Learning desk: example lessons with completion state and progress tracking.
- Distance lab: a synthetic pinhole-camera calculation with input validation; accompanied by a local Python API example.

These are original early demos prepared for this portfolio. They are not client deployments or evidence of commercial employment.

Working approach

Review the existing code and requirements → agree scope → implement → test relevant behavior → explain changes and limitations.
